Shot Peener Forum 2021

Shot peening experts from the aviation industry exchange ideas

After a one-year break due to the pandemic, the shot peening forum with experts from German engine manufacturers and MRO companies is back at the starting line.

The 15 to 20 dedicated shot peening experts and process managers from a total of ten manufacturing and maintenance companies for jet engines and components in Germany have been meeting annually since 2017 to discuss general issues related to shot peening of engine components across companies. The confidentiality of company-specific information is of course maintained.

This year, sentenso is hosting the fourth edition online. The are the main topics planned:

- Visual inspection and evaluation of swelling on edges after shot peening
- Visual inspection tools for coverage determination, current state of development
- Masking with UV-curing pastes
- Recertification Training Shot Peening Level 1 and 2
